SUMMARY

Senior Android Engineer with 7+ years of experience building scalable Android applications using Kotlin, Jetpack Compose, MVVM, Clean Architecture, and multi-module architecture. Experienced in performance optimization, offline-first systems, AI-powered mobile features, CI/CD, and Google Play releases. Passionate about building high-quality products and mentoring engineering teams.

EXPERIENCE

Senior Android Developer

Aug 2025 – Jul 2026

PlanRadar · Full-time — Hybrid

- Develop and maintain PlanRadar's native Android app, a construction and real-estate SaaS for site documentation, defect/task management, and building inspections.
- Build offline-first features that let field users capture defects, photos, and inspections on-site and sync in real time.
- Work in a cross-functional Agile team using Kotlin, MVVM, Clean Architecture, Jetpack, Room, and Coroutines, focusing on performance, stability, and secure Play Store releases.
- Contribute to AI-powered features in the PlanRadar app, integrating intelligent automation to streamline site documentation, defect detection, and inspection workflows for field teams.
- Developed modern UI using Jetpack Compose while maintaining existing XML-based screens.

Senior Android Developer

Jun 2023 – May 2025

Heallo Care · Full-time — Cairo, Egypt · Remote

- Refactored the codebase from a legacy structure to a modern architecture using MVVM and Clean Architecture, applying SOLID principles for better scalability and maintainability.
- Implemented a multi-module approach to improve organization and achieve clearer separation of concerns.
- Contributed to 60–70% of the application and added ~10 new features to meet evolving user needs.
- Maintained and enhanced code quality, updating libraries to their latest versions for up-to-date functionality and security; leveraged Firebase, Google Play Services, and analytics to boost engagement.

Wndo · Remote

Nov 2021 – Apr 2024

Senior Android Developer (Part-time) *May 2023 – Apr 2024*

Senior Android Developer (Full-time) *Nov 2021 – May 2023 · Cairo, Egypt*

Built about 60% of the app, based entirely on Coroutines, Retrofit, and MVVM. Key contributions:

- Optimized video player performance, reducing preloading time from 4.5s (up to 10s) to 0.5s.
- Increased application security by ~30% by identifying and fixing vulnerabilities; app reached ~150,000 downloads in a short period.
- Improved overall performance by 30–40% through refactoring legacy code and adding features.
- Built Login & Register (Retrofit, Google, Facebook SDK), OTP via SMS, Video player (ExoPlayer), Cart, Details, Search, Profile, and full Seller modules.
- Applied CI/CD for automated testing and smooth Google Play deployment.
- Collaborated with backend, product, and design teams in Agile sprints.

Mid / Senior Android Developer

Aug 2019 – Sep 2021

ElmeyaSoft · Full-time — Cairo, Egypt

- Built 5+ complete applications and contributed to ~10 projects, creating Android apps with MVVM, Room, Coroutines, Retrofit, Kotlin, and Dagger 2.
- Converted Figma and Adobe XD designs into Android apps, integrating Firebase, maps, location, chat, and notifications.

TEACHING & OUTREACH

Android & Programming Instructor (Contract) *Feb 2017 – Feb 2023*

Futuristic Science Organization · Discover Center Tanta — Egypt

- Taught children (ages 12–17) programming in Python and Java, and trained adults and university students in mobile development with Java, Kotlin, and Flutter.
- Prepared training materials and developed learning roadmaps across multiple courses.

EDUCATION

Bachelor of Computer Science *Jan 2019 – Jan 2023*

University of the People, Pasadena, CA — GPA 3.7 / 4.0

LICENSES & CERTIFICATIONS

- AI Interview for Android Development — micro1 (Jun 2025)
- Problem Solving (Basic) Certificate — HackerRank (Dec 2024)

PROJECTS

- **KnowledgeSharing (Oct 2025 – Present) —** github.com/alihrhera/KnowledgeSharing
- Hellocare (May 2023 – Present) — Android app built with MVVM, associated with Heallo Care.

SKILLS

Languages: Kotlin, Java, Dart, PHP, Python

Android & Architecture: Android SDK, Jetpack (LiveData, ViewModel, Room, Navigation), Kotlin Coroutines, RxJava, SOLID, Dependency Injection (Dagger, Hilt), Jetpack Compose, AndroidX, WorkManager, DataStore, Paging3

Architecture:MVVM, Clean Architecture, Multi-module

Data & Integration: Retrofit, REST APIs, Room, Firebase, Google Play Services, ExoPlayer, App Analytics, Play Store Release

Testing & Tools: JUnit, Espresso, CI/CD, Git, Android Studio, Figma, Adobe XD, Agile, Cross-functional Collaboration

LANGUAGES

Arabic — Native proficiency
English — Professional working proficiency

Open source contribution

- **LibreTube https://github.com/libre-tube/LibreTube**.
  Fixed UI and Android issues, submitted merged pull requests.
- **AmazeFileManager https://github.com/TeamAmaze/AmazeFileManager**
  Contributed bug fixes and feature improvements.

HONORS & AWARDS

- **Huawei AppsUP 2022 (Dec 2022) —** Won 2 prizes: Best Arabic App and Best Social Impact App (Middle East), for an app supporting people with learning difficulties.
